

Final Report

Name: Nagabhushana Raju S

USN: 4MH22CD034

Period: January–May 2026

Total Entries: 108

Total Hours: 777.7

January 2026

22/01/2026 — 8 hours

Work:

- On my first day at NYERAS Edutech & Innovations, I was introduced to the organizational structure, workflow, and the expectations of a Data Analyst role within the company.
- I studied the complete lifecycle of data analytics, starting from data collection, data processing, exploratory analysis, and finally to decision-making. This gave me a comprehensive understanding of how raw data is transformed into actionable business insights.
- Through discussions with senior analysts, I explored how businesses utilize data-driven approaches to solve real-world problems and enhance operational efficiency. I understood the critical role that data plays in modern business strategy.
- I learned the importance of translating raw data into actionable insights and how these insights directly drive business strategy, improve decision-making, and enhance competitive advantage.

Learning:

- Understanding of complete data analytics lifecycle from collection to decision-making
- Exposure to industry workflow, organizational structure, and professional environment
- Awareness of data-driven decision making and its impact on business strategy

Skills:

- Observation
- Analytical thinking
- Professional communication

References:

Company orientation materials, Data Analytics Guidelines Document, NYERAS internal portal

Blockers:

Initial onboarding delay due to LMS system access issue

23/01/2026 — 8 hours

Work:

- I focused on understanding the three fundamental types of data: structured data organized in relational databases, semi-structured data like JSON and XML formats, and unstructured data including text documents and images.
- I analyzed sample datasets from the company to understand how different types of data are stored, managed, processed, and utilized in real-world systems. This practical exercise helped me appreciate the complexity of data management.
- I learned that data accuracy, completeness, consistency, and validity are critical factors in ensuring reliable analysis. Poor data quality directly impacts the reliability and usefulness of any analytical conclusions.
- Through practical examples, I understood how data quality issues such as missing values, duplicates, and inconsistencies can lead to incorrect insights and poor business decisions. I appreciated the importance of data validation and verification.

Learning:

- Knowledge of data types including structured, semi-structured, and unstructured formats
- Critical importance of data quality and validation in analysis accuracy
- Understanding of dataset structures and real-world data management practices

Skills:

- Data analysis
- Logical thinking
- Attention to detail

References:

Data Quality Standards Document, Sample Dataset Repository, Data Types Reference Guide

Blockers:

NIL

24/01/2026 — 8 hours**Work:**

- I worked extensively with Microsoft Excel and explored its fundamental functionalities and capabilities. I practiced using basic formulas like SUM, AVERAGE, COUNT, and IF statements to perform calculations on large datasets efficiently.
- I learned how to use sorting and filtering features to organize and subset data for analysis purposes. I practiced data formatting techniques to improve data presentation and readability, making it easier for stakeholders to understand results.
- Through hands-on practice on sample datasets, I performed simple analytical operations to extract meaningful insights. I learned how to create basic charts and graphs to visualize trends and patterns in data.
- I understood the importance of data visualization in communicating results to stakeholders and decision-makers. I realized that effective visualization can make complex data more understandable and actionable.

Learning:

- Excel fundamentals including formulas, functions, and basic calculations
- Data manipulation techniques through sorting, filtering, and organizing datasets
- Basic analytical operations and chart creation for data visualization

Skills:

- Excel proficiency
- Data manipulation
- Problem-solving

References:

Microsoft Excel Training Manual, Excel Functions Reference Sheet, Sample Datasets

Blockers:

NIL

25/01/2026 — 8 hours**Work:**

- I explored advanced Excel techniques and learned about powerful tools for comprehensive data analysis. I studied and practiced pivot tables, which allowed me to summarize large datasets and identify patterns and trends quickly and efficiently.
- I learned how to create dynamic dashboards using various chart types and explored conditional

formatting to highlight important data points and trends. These techniques helped present data in a visually appealing and easy-to-understand manner.

- I understood how effective data visualization can simplify complex information and support better decision-making. Through practical exercises, I created several pivot tables and interactive dashboards that helped answer specific business questions.
- I realized that advanced Excel skills are essential for a data analyst and that proficiency in these tools can significantly improve analytical efficiency and the quality of insights delivered to stakeholders.

Learning:

- Advanced Excel skills including pivot tables for data summarization
- Data pattern identification and trend analysis using advanced features
- Advanced visualization techniques using charts and conditional formatting

Skills:

- Visualization
- Data summarization
- Technical analysis

References:

Advanced Excel Techniques Guide, Pivot Table Tutorial, Dashboard Design Best Practices

Blockers:

NIL

26/01/2026 — 8 hours

Work:

- I learned essential data preprocessing techniques that are critical in preparing data for analysis. I studied and practiced handling missing values using various imputation methods, understanding that missing data is a common challenge in real-world datasets.
- I learned how to identify and remove duplicate records from datasets while preserving data integrity. I practiced correcting inconsistencies in data such as formatting issues, spelling errors, and standardization problems to ensure data consistency.
- This step was crucial in understanding that data quality directly impacts analysis accuracy and reliability. I learned that preprocessing often takes 60-70% of the total analysis time but is absolutely essential for producing reliable results.
- Through practical exercises on real company datasets, I practiced these techniques to ensure clean and reliable data for downstream analysis tasks. I understood that investing time in data preprocessing pays dividends in the form of accurate and trustworthy analytical results.

Learning:

- Data cleaning techniques and best practices for handling missing values
- Data preprocessing and standardization to ensure consistency
- Understanding of how data quality issues impact analytical accuracy

Skills:

- Preprocessing
- Attention to detail
- Quality assurance

References:

Data Preprocessing Guide, Data Quality Standards, Real Dataset Examples

Blockers:

Minor issues with inconsistent dataset formats from different sources

27/01/2026 — 8 hours

Work:

- I started my journey with SQL (Structured Query Language) and learned fundamental database concepts. I studied and practiced basic SQL queries including SELECT statements to retrieve data and WHERE clauses to filter data based on specific conditions.
- I learned how to use ORDER BY to sort results in ascending or descending order and GROUP BY for grouping data by specific columns. I practiced using various operators like =, !=, <, >, AND, OR to filter records precisely.
- I applied these concepts to extract relevant information from company databases. I practiced writing queries on real database tables and understood how SQL enables direct interaction with databases, making data retrieval efficient and precise.
- Through extensive practice, I gained confidence in writing SQL queries and retrieving specific data efficiently. I understood that SQL is a fundamental skill for any data analyst and mastering it opens doors to working with large-scale databases.

Learning:

- SQL fundamentals and query syntax including SELECT and WHERE clauses
- Data filtering techniques and conditional query writing
- Database interaction and efficient data retrieval from relational databases

Skills:

- SQL
- Logical reasoning
- Database querying

References:

SQL Tutorial Documentation, Query Writing Best Practices, SQL Cheat Sheet

Blockers:

NIL

28/01/2026 — 8 hours

Work:

- I explored advanced SQL concepts and learned how to write complex queries for sophisticated data analysis. I studied JOIN operations including INNER JOIN, LEFT JOIN, RIGHT JOIN, and FULL OUTER JOIN to combine data from multiple tables seamlessly.
- I learned GROUP BY for grouping records by specific columns and HAVING clauses for filtering grouped data based on aggregate conditions. I practiced aggregation functions like COUNT, SUM, AVG, MIN, and MAX to calculate summary statistics efficiently.
- I studied subqueries and derived tables for complex multi-step analysis. These techniques helped me combine multiple datasets efficiently and extract comprehensive insights from relational databases containing millions of records.
- Through hands-on practice, I wrote complex queries to answer challenging business questions and gained proficiency in advanced SQL operations. I realized that advanced SQL skills are critical for performing complex analytical tasks in real-world business scenarios.

Learning:

- Advanced SQL with JOIN operations for combining data from multiple tables
- Data aggregation using GROUP BY, HAVING clauses, and aggregation functions
- Complex query writing for advanced data insights

Skills:

- Database querying
- Problem-solving
- Logical thinking

References:

Advanced SQL Guide, Query Optimization Techniques, Complex Query Examples

Blockers:

Query debugging took additional time due to complex JOIN operations

29/01/2026 — 8 hours**Work:**

- I was introduced to Power BI, a powerful business intelligence and data visualization tool used widely in the industry. I learned how to import datasets from various data sources including CSV files, Excel spreadsheets, and relational databases seamlessly.
- I studied data transformation techniques using Power Query to clean and prepare data before analysis. I learned how to create relationships between tables and build comprehensive data models that accurately represent business logic.
- I practiced creating basic dashboards with various visualization types including bar charts, line charts, pie charts, and tables. I understood the importance of choosing appropriate visualization types based on the data and the message to be conveyed.
- Through practical exercises, I understood the importance of visualization in decision-making and how raw data becomes actionable insights through proper visualization and presentation. I explored the Power BI interface and learned to connect to multiple data sources.

Learning:

- Power BI interface navigation and basic functionality
- Data import and transformation using Power Query for data preparation
- Dashboard creation and visualization fundamentals for business intelligence

Skills:

- Visualization
- Tool usage
- Dashboard creation

References:

Power BI Documentation, Data Visualization Best Practices, Dashboard Design Guide

Blockers:

NIL

30/01/2026 — 8 hours**Work:**

- I created interactive dashboards using Power BI and focused on presenting complex data in a meaningful and user-friendly way. I learned dashboard design principles including proper color selection, layout optimization, and interactive filter creation for better user experience.
- I practiced creating multiple visualizations on a single page and linking them through slicers for interactivity. I learned how storytelling with data can influence business decisions and drive actions by making insights compelling and memorable.
- I studied how to highlight key metrics and important trends to guide viewer attention and facilitate quick understanding of critical information. I learned to balance aesthetics with functionality to create professional-looking dashboards.
- Through this exercise, I understood that visualization is not just about displaying data, but about communicating insights effectively to stakeholders. I created several dashboards that helped stakeholders understand business performance and identify areas for improvement.

Learning:

- Interactive dashboard design principles and best practices
- Data storytelling techniques and insight communication for stakeholders
- Advanced visualization practices including filters and interactive elements

Skills:

- Presentation
- UI thinking
- Communication

References:

Dashboard Design Best Practices, Data Storytelling Guide, Power BI Advanced Features

Blockers:

Minor visualization alignment adjustments required

31/01/2026 — 8 hours

Work:

- I consolidated all the knowledge gained during the month through a comprehensive integrated project. I applied Excel for data manipulation and analysis, SQL for complex data retrieval from databases, and Power BI for creating interactive dashboards.
- This mini integrated task helped me understand the complete end-to-end data analysis workflow and how different tools complement each other seamlessly. I appreciated how Excel handles structured data processing efficiently, SQL queries complex databases effectively, and Power BI communicates insights visually.
- I worked on a real business problem, extracting data using SQL, processing it with Excel, and creating dashboards in Power BI to present findings to stakeholders. This practical experience reinforced the importance of tool integration and workflow optimization.
- Through this exercise, I gained practical experience in the complete data analytics pipeline and realized that becoming a proficient data analyst requires mastery of multiple tools and the ability to choose the right tool for each task.

Learning:

- End-to-end data analysis workflow and project execution
- Integration of multiple tools (Excel, SQL, Power BI) for comprehensive analysis
- Practical application of learned concepts in real-world business scenarios

Skills:

- Integration
- Analysis
- Project execution

References:

Integrated Project Documentation, Complete Analytics Workflow Guide, Tool Integration Guide

NIL

February 2026

01/02/2026 — 7.5 hours

Work:

Focused on strengthening Excel skills by working on real datasets involving sales and customer information. Applied advanced formulas and explored data validation techniques to ensure

accuracy and consistency in data handling.

Learning:

- Advanced Excel usage
- Data validation techniques
- Handling real-world datasets

Skills:

- Excel
- Data handling

References:

<https://www.nyerasclasses.in/dashboard>

Blockers:

NIL

02/02/2026 — 8 hours

Work:

Conducted exploratory data analysis on provided datasets. Identified key trends and patterns.

Learning:

- Gained practical experience with industry-standard tools and technologies.

Skills:

- Data handling
- Data preprocessing

References:

<https://www.nyerasclasses.in/dashboard>

Blockers:

NIL

03/02/2026 — 6.5 hours

Work:

Explored data preprocessing techniques in depth including normalization, encoding categorical variables, and feature scaling methods. This improved understanding of preparing raw data for machine learning models.

Learning:

- Data preprocessing techniques
- Feature scaling methods
- Encoding categorical data

Skills:

- Preprocessing
- Data transformation

References:

<https://www.nyerasclasses.in/dashboard/courses/13>

Blockers:

Initial confusion in choosing correct encoding technique

04/02/2026 — 7 hours

Work:

Studied SQL optimization and database query performance. Executed complex queries for data extraction.

Learning:

- Enhanced knowledge of data-driven decision making.

Skills:

- SQL
- Visualization

References:

<https://www.nyerascourses.in/dashboard>

Blockers:

NIL

05/02/2026 — 8 hours

Work:

Worked on SQL optimization techniques including subqueries and indexing concepts. Practiced improving query performance and reducing execution time for large datasets.

Learning:

- SQL optimization
- Complex queries
- Database efficiency

Skills:

- SQL
- Problem solving

References:

<https://www.nyerascourses.in/dashboard>

Blockers:

Query optimization took additional debugging time

06/02/2026 — 6 hours

Work:

Worked with Power BI to build interactive dashboards. Integrated multiple data sources.

Learning:

- Improved understanding of data analysis lifecycle and best practices.

Skills:

- Power BI
- Tableau

References:

<https://www.nyerascourses.in/dashboard>

Blockers:

Minor technical issues resolved

07/02/2026 — 6 hours

Work:

Studied principles of data visualization including proper chart selection, color usage, and effective storytelling techniques to convey business insights clearly.

Learning:

- Visualization principles
- Chart selection
- Data storytelling

Skills:

- Visualization
- Design thinking

References:

<https://www.nyerasclasses.in/dashboard/courses/13>

Blockers:

NIL

08/02/2026 — 8 hours

Work:

Studied machine learning fundamentals and algorithms. Practiced model building with sample data.

Learning:

- Developed stronger analytical and problem-solving skills.

Skills:

- Python
- Machine learning

References:

<https://www.nyerasclasses.in/dashboard>

Blockers:

NIL

09/02/2026 — 6 hours

Work:

Worked on data pipeline development and workflow automation concepts.

Learning:

- Enhanced knowledge of data-driven decision making.

Skills:

- Machine learning
- Data engineering

References:

<https://www.nyerasclasses.in/dashboard>

Blockers:

Minor technical issues resolved

10/02/2026 — 7 hours

Work:

Worked with Power BI to build advanced dashboards integrating multiple datasets and creating calculated columns and measures for deeper analysis.

Learning:

- Advanced dashboards
- Data integration
- Calculated fields

Skills:

- Power BI
- Data modeling

References:

<https://www.nyerasclasses.in/dashboard>

Blockers:

Faced minor issues while linking multiple datasets

11/02/2026 — 8 hours

Work:

Worked on data analysis and processing tasks. Focused on improving efficiency and accuracy in data handling.

Learning:

- Improved understanding of data analysis lifecycle and best practices.

Skills:

- Analytics
- Excel

References:

<https://www.nyerasclasses.in/dashboard>

Blockers:

NIL

12/02/2026 — 6.5 hours

Work:

Explored Tableau for comparative visualization and dashboard design focusing on interactivity and user engagement.

Learning:

- Tableau basics
- Interactive dashboards
- Comparative analysis

Skills:

- Tableau
- Visualization

References:

<https://www.nyerascourses.in/dashboard/courses/13>

Blockers:

Learning new tool interface took extra time

13/02/2026 — 7 hours

Work:

Practiced advanced Excel techniques including formulas, pivot tables, and data visualization.

Learning:

- Developed stronger analytical and problem-solving skills.

Skills:

- Data handling
- Data preprocessing

References:

<https://www.nyerascourses.in/dashboard>

Blockers:

NIL

14/02/2026 — 8 hours

Work:

Studied SQL optimization and database query performance. Executed complex queries for data extraction.

Learning:

- Enhanced knowledge of data-driven decision making.

Skills:

- Data preprocessing
- SQL

References:

<https://www.nyerascourses.in/dashboard>

Blockers:

NIL

15/02/2026 — 7.2 hours

Work:

Started understanding machine learning fundamentals including supervised and unsupervised learning techniques along with different model evaluation metrics used in real-world applications.

Learning:

- Machine learning basics
- Supervised vs unsupervised learning
- Model evaluation metrics

Skills:

- Conceptual understanding
- Analytical thinking

References:

<https://www.nyerasclasses.in/dashboard>

Blockers:

Initial difficulty in understanding ML terminology

16/02/2026 — 7 hours**Work:**

Worked with Power BI to build interactive dashboards. Integrated multiple data sources.

Learning:

- Improved understanding of data analysis lifecycle and best practices.

Skills:

- Visualization
- Power BI

References:

<https://www.nyerasclasses.in/dashboard>

Blockers:

NIL

17/02/2026 — 8 hours**Work:**

Practiced Tableau for comparative analysis and interactive visualizations.

Learning:

- Gained practical experience with industry-standard tools and technologies.

Skills:

- Power BI
- Tableau

References:

<https://www.nyerasclasses.in/dashboard>

Blockers:

NIL

18/02/2026 — 6.8 hours**Work:**

Worked on small machine learning models using sample datasets and evaluated their performance using metrics such as accuracy and error rates.

Learning:

- Model training
- Performance evaluation
- Hands-on machine learning

Skills:

- Machine learning

- Data evaluation

References:

<https://www.nyerasclasses.in/dashboard/courses/13>

Blockers:

Model tuning required multiple iterations

19/02/2026 — 7 hours**Work:**

Worked on data pipeline development and workflow automation concepts.

Learning:

- Enhanced knowledge of data-driven decision making.

Skills:

- Python
- Machine learning

References:

<https://www.nyerasclasses.in/dashboard>

Blockers:

NIL

20/02/2026 — 5.9 hours**Work:**

Explored data pipelines and workflow automation concepts used in real-world analytics systems to understand how large-scale data processing is managed efficiently.

Learning:

- Data pipelines
- Workflow automation
- System-level thinking

Skills:

- System thinking
- Data engineering basics

21/02/2026 — 6 hours**Work:**

Worked on data analysis and processing tasks. Focused on improving efficiency and accuracy in data handling.

Learning:

- Improved understanding of data analysis lifecycle and best practices.

Skills:

- Data engineering
- Analytics

References:

<https://www.nyerascourses.in/dashboard>

Blockers:

Minor technical issues resolved

22/02/2026 — 7.6 hours**Work:**

Began planning for retail sales analysis project including dataset selection, defining the problem statement, and outlining the analytical approach.

Learning:

- Project planning
- Problem definition
- Analytical structuring

Skills:

- Planning
- Analytical design

References:

<https://www.nyerascourses.in/dashboard/courses/13>

Blockers:

Selecting appropriate dataset required extra time

23/02/2026 — 8 hours**Work:**

Practiced advanced Excel techniques including formulas, pivot tables, and data visualization.

Learning:

- Developed stronger analytical and problem-solving skills.

Skills:

- Excel
- Data handling

References:

<https://www.nyerascourses.in/dashboard>

Blockers:

NIL

24/02/2026 — 6 hours**Work:**

Studied SQL optimization and database query performance. Executed complex queries for data extraction.

Learning:

- Enhanced knowledge of data-driven decision making.

Skills:

- Data handling
- Data preprocessing

References:

<https://www.nyerasclasses.in/dashboard>

Blockers:

Minor technical issues resolved

25/02/2026 — 6.3 hours

Work:

Researched advanced retrieval and ranking techniques and their importance in improving analytical outputs and system performance.

Learning:

- Research techniques
- Ranking methods
- Advanced analytics concepts

Skills:

- Research
- Critical thinking

References:

<https://www.nyerasclasses.in/dashboard>

Blockers:

Understanding advanced concepts took additional effort

26/02/2026 — 8 hours

Work:

Worked with Power BI to build interactive dashboards. Integrated multiple data sources.

Learning:

- Improved understanding of data analysis lifecycle and best practices.

Skills:

- SQL
- Visualization

References:

<https://www.nyerasclasses.in/dashboard>

<https://www.nyerasclasses.in/dashboard>

Blockers:

Minor technical issues resolved

28/02/2026 — 7.4 hours**Work:**

Reviewed all learnings from February and consolidated knowledge by applying combined techniques in a mini analytical workflow integrating multiple tools and concepts.

Learning:

- Knowledge consolidation
- Tool integration
- Workflow understanding

Skills:

- Integration
- Workflow design

References:

<https://www.nyerasclasses.in/dashboard>

Blockers:

NIL

March 2026

01/03/2026 — 7.4 hours**Work:**

Initiated the Retail Store Sales Insights project by identifying the problem statement and understanding dataset requirements. Explored available retail datasets and finalized the structure for further analysis.

Learning:

- Project initiation process
- Problem statement definition
- Dataset selection strategy

Skills:

- Planning
- Analytical thinking

References:

<https://www.nyerasclasses.in/dashboard>

Blockers:

Selecting appropriate dataset required additional time

02/03/2026 — 6.8 hours**Work:**

Started data collection and performed initial inspection of dataset including checking columns, structure, and data types to understand the overall schema.

Learning:

- Data inspection techniques
- Understanding schema
- Column-level analysis

Skills:

- Data understanding
- Exploration

References:

<https://www.nyerascourses.in/dashboard/courses/13>

Blockers:

NIL

03/03/2026 — 7.2 hours**Work:**

Performed data cleaning including handling missing values, correcting inconsistencies, and removing duplicates to ensure dataset reliability.

Learning:

- Data cleaning techniques
- Handling missing values
- Data consistency improvement

Skills:

- Preprocessing
- Attention to detail

References:

<https://www.nyerascourses.in/dashboard>

Blockers:

Faced inconsistent data formats in few columns

04/03/2026 — 6.1 hours**Work:**

Conducted exploratory data analysis (EDA) to identify patterns, trends, and relationships within the dataset using statistical summaries and visualizations.

Learning:

- Exploratory Data Analysis
- Pattern recognition
- Statistical insights

Skills:

- EDA
- Visualization

References:

<https://www.nyerasclasses.in/dashboard/courses/13>

Blockers:

NIL

05/03/2026 — 7.6 hours**Work:**

Created multiple visualizations including bar charts, line graphs, and distribution plots to better understand sales patterns and customer behavior.

Learning:

- Visualization techniques
- Graph selection
- Trend analysis

Skills:

- Visualization
- Data storytelling

References:

<https://www.nyerasclasses.in/dashboard>

Blockers:

Fine-tuning visual clarity required multiple iterations

06/03/2026 — 5.9 hours**Work:**

Performed feature engineering by creating derived columns such as revenue, profit margins, and customer segmentation features.

Learning:

- Feature engineering
- Derived metrics creation
- Data transformation

Skills:

- Feature engineering
- Transformation

References:

<https://www.nyerasclasses.in/dashboard/courses/13>

Blockers:

NIL

07/03/2026 — 7.1 hours**Work:**

Prepared dataset for model training by splitting into training and testing sets and ensuring proper

normalization of numerical features.

Learning:

- Train-test split
- Normalization techniques
- Model preparation

Skills:

- Data preparation
- Machine learning basics

References:

<https://www.nyerasclasses.in/dashboard>

Blockers:

Understanding scaling methods required extra effort

08/03/2026 — 6.4 hours

Work:

Started training basic predictive models for sales forecasting and evaluated their initial performance.

Learning:

- Model training
- Prediction techniques
- Performance evaluation

Skills:

- Machine learning
- Evaluation

References:

<https://www.nyerasclasses.in/dashboard/courses/13>

Blockers:

Initial model accuracy was low

09/03/2026 — 7.7 hours

Work:

Improved model performance by tuning parameters and testing different approaches for better accuracy and generalization.

Learning:

- Model tuning
- Hyperparameter adjustment
- Performance improvement

Skills:

- Optimization
- Problem solving

References:

<https://www.nyerasclasses.in/dashboard>

Blockers:

Tuning required multiple trials

10/03/2026 — 6.3 hours

Work:

Integrated cleaned data, visualizations, and model outputs into a unified workflow pipeline.

Learning:

- Pipeline integration
- Workflow structuring
- System-level thinking

Skills:

- Integration
- System design

References:

<https://www.nyerasclasses.in/dashboard/courses/13>

Blockers:

NIL

11/03/2026 — 7.0 hours

Work:

Started developing a dashboard interface to display analysis results and model predictions in a user-friendly format.

Learning:

- Dashboard planning
- User interface design
- Data presentation

Skills:

- UI thinking
- Visualization

References:

<https://www.nyerasclasses.in/dashboard>

Blockers:

Layout structuring required adjustments

12/03/2026 — 6.6 hours

Work:

Tested dashboard functionality and ensured smooth interaction between backend processing and frontend visualization.

Learning:

- System testing
- Frontend-backend interaction
- Debugging workflow

Skills:

- Testing

- Debugging

References:

<https://www.nyerasclasses.in/dashboard/courses/13>

Blockers:

Minor integration bugs identified and fixed

13/03/2026 — 7.5 hours**Work:**

Started implementing the retail analysis script by structuring the pipeline for loading dataset, cleaning, and generating initial outputs. Worked on understanding the flow of `phase1_retail_insights.py`.

Learning:

- Script-based data pipeline
- Code structuring
- Workflow automation basics

Skills:

- Python
- Code understanding

References:

<https://github.com/Mr-nagabhushana-at-Git-hub/NYERAS>

Blockers:

Understanding large script structure took time

14/03/2026 — 6.8 hours**Work:**

Worked on dataset ingestion and preprocessing logic including automatic column detection such as `revenue`, `quantity`, and `order_date` fields.

Learning:

- Auto column detection
- Flexible dataset handling
- Preprocessing pipelines

Skills:

- Data preprocessing
- Python

References:

<https://github.com/Mr-nagabhushana-at-Git-hub/NYERAS>

Blockers:

Handling inconsistent column naming required adjustments

15/03/2026 — 7.2 hours**Work:**

Generated exploratory plots and reports using the analysis script. Verified outputs like cleaned dataset, visualizations, and markdown reports.

Learning:

- EDA automation
- Report generation
- Output validation

Skills:

- Visualization
- Validation

References:

<https://www.nyerasclasses.in/dashboard>

Blockers:

Plot formatting needed refinement

16/03/2026 — 6.3 hours**Work:**

Worked on model training pipeline within the script including preparing features and evaluating model outputs.

Learning:

- Model pipeline integration
- Feature preparation
- Prediction workflow

Skills:

- Machine learning
- Pipeline design

References:

<https://github.com/Mr-nagabhushana-at-Git-hub/NYERAS>

Blockers:

Model tuning required experimentation

17/03/2026 — 7.7 hours**Work:**

Started working with the dashboard (retail_ui_server.py) and explored how backend processing connects with frontend UI.

Learning:

- Backend-frontend interaction
- Dashboard architecture
- Server-based workflows

Skills:

- Backend
- System design

References:

<https://www.nyerasclasses.in/dashboard>

Blockers:

Understanding UI-server flow required debugging

18/03/2026 — 6.5 hours

Work:

Tested dashboard features including Run Full Flow, Upload Data, and Refresh Status options for workflow automation.

Learning:

- Workflow automation
- User interaction design
- System testing

Skills:

- Testing
- Debugging

References:

<https://github.com/Mr-nagabhushana-at-Git-hub/NYERAS>

Blockers:

Minor bugs in workflow execution

19/03/2026 — 7.1 hours

Work:

Worked with notebook version (retail_auto_scrape_clean_model.ipynb) and executed full pipeline step-by-step.

Learning:

- Notebook workflow
- Stepwise execution
- Pipeline debugging

Skills:

- Jupyter
- Analysis

References:

<https://github.com/Mr-nagabhushana-at-Git-hub/NYERAS>

Blockers:

Kernel execution order caused temporary errors

20/03/2026 — 6.9 hours

Work:

Tested START_APP.bat launcher and observed full automation including environment setup, dependency installation, and dashboard launch.

Learning:

- Automation scripts
- Environment setup
- End-to-end execution

Skills:

- Automation
- System integration

References:

<https://github.com/Mr-nagabhushana-at-Git-hub/NYERAS>

Blockers:

Initial environment setup required troubleshooting

21/03/2026 — 7.3 hours**Work:**

Refined data pipeline by optimizing preprocessing steps and ensuring consistent data flow from raw input to cleaned dataset outputs.

Learning:

- Pipeline optimization
- Data flow management
- Process refinement

Skills:

- Optimization
- Pipeline design

Blockers:

Minor inconsistencies in intermediate outputs

22/03/2026 — 6.7 hours**Work:**

Worked on improving visualization outputs including adjusting plots, labels, and layouts for better clarity and business understanding.

Learning:

- Visualization refinement
- Clarity in reporting
- Data presentation improvement

Skills:

- Visualization
- Presentation

References:

<https://www.nyerasclasses.in/dashboard>

Blockers:

Multiple iterations required for clean visuals

23/03/2026 — 7.6 hours**Work:**

Integrated model predictions into final output workflow and ensured predictions align with cleaned dataset and visualization layers.

Learning:

- Prediction integration
- Model-output alignment
- End-to-end workflow connection

Skills:

- Machine learning
- Integration

References:

<https://github.com/Mr-nagabhushana-at-Git-hub/NYERAS>

Blockers:

Alignment issues between model output and dataset

24/03/2026 — 6.2 hours**Work:**

Validated generated outputs including CSV files, plots, and model artifacts stored in outputs directory.

Learning:

- Output validation
- Data verification
- Result consistency

Skills:

- Validation
- Debugging

References:

<https://www.nyerasclasses.in/dashboard>

Blockers:

NIL

25/03/2026 — 7.4 hours**Work:**

Tested full pipeline execution using demo dataset and ensured smooth execution from data loading to final reporting.

Learning:

- End-to-end testing
- Workflow execution
- System reliability

Skills:

- Testing
- System validation

References:

<https://github.com/Mr-nagabhushana-at-Git-hub/NYERAS>

Blockers:

Pipeline failed initially due to missing dependencies

26/03/2026 — 6.5 hours

Work:

Worked on improving automation script behavior including environment setup and dependency installation logic.

Learning:

- Automation scripting
- Environment setup
- Dependency management

Skills:

- Automation
- System setup

References:

<https://github.com/Mr-nagabhushana-at-Git-hub/NYERAS>

Blockers:

Installation delays due to package conflicts

27/03/2026 — 7.1 hours

Work:

Performed debugging and error handling improvements in both script and dashboard workflow.

Learning:

- Error handling
- Debugging techniques
- System stability improvement

Skills:

- Debugging
- Problem solving

References:

<https://www.nyerasclasses.in/dashboard>

Blockers:

Multiple edge-case errors identified

28/03/2026 — 6.9 hours

Work:

Prepared final insights and interpreted business-level results from analysis including sales trends and customer behavior.

Learning:

- Insight generation
- Business interpretation
- Decision support

Skills:

- Business analysis

- Interpretation

References:

<https://www.nyerasclasses.in/dashboard/courses/13>

Blockers:

NIL

29/03/2026 — 7.5 hours**Work:**

Documented complete workflow including data extraction, preprocessing, EDA, model training, and dashboard integration.

Learning:

- Technical documentation
- Workflow explanation
- Project summarization

Skills:

- Documentation
- Communication

References:

<https://github.com/Mr-nagabhushana-at-Git-hub/NYERAS>

Blockers:

Ensuring completeness of documentation required time

30/03/2026 — 6.4 hours**Work:**

Performed final system testing and ensured that all components including scripts, dashboard, and outputs are functioning correctly.

Learning:

- System testing
- Final validation
- Quality assurance

Skills:

- Testing
- QA

References:

<https://www.nyerasclasses.in/dashboard>

Blockers:

Minor fixes required before finalization

31/03/2026 — 7.8 hours**Work:**

Completed the Retail Store Sales Insights project and verified complete system functionality including dashboard, automation, and reporting outputs.

Learning:

- Project completion
- End-to-end system understanding
- Professional readiness

Skills:

- Integration
- System design

References:

<https://github.com/Mr-nagabhushana-at-Git-hub/NYERAS>

Blockers:

NIL

April 2026

01/04/2026 — 8 hours

Work:

Continued ML/AI Portfolio dashboard refinement. Improved GUI elements and tested all 10 project launches from dashboard.

Learning:

- Tkinter advanced widgets
- Event handling optimization
- User interface refinement

Skills:

- GUI Development
- Python
- UI Design

References:

<https://docs.python.org/3/library/tkinter.html>

Blockers:

Minor threading issues resolved with proper synchronization

02/04/2026 — 7.6 hours

Work:

Started Brain Tumor Detection (NeuroScan AI) project. Set up ensemble deep learning architecture with ResNet50, EfficientNetV2, and Vision Transformer models for MRI analysis.

Learning:

- Ensemble learning methodologies
- Transfer learning with pre-trained models
- PyTorch model architecture design

Skills:

- Deep Learning
- Ensemble Methods
- PyTorch

References:

<https://pytorch.org/docs/stable/torchvision/models.html>

Blockers:

GPU memory constraints solved with gradient checkpointing

03/04/2026 — 7.4 hours**Work:**

Enhanced ML/AI Portfolio typing animations and knowledge flow panels. Tested completion popup and upload/test interface functionality.

Learning:

- Animation implementation techniques
- File dialog integration
- Modal window design

Skills:

- GUI Programming
- Animation
- Event Handling

References:

<https://docs.python.org/3/library/tkinter.filedialog.html>

Blockers:

File path handling on Windows required special path formatting

04/04/2026 — 7.8 hours**Work:**

Began Brain Tumor Detection data preprocessing. Implemented medical image normalization, cropping, and augmentation for MRI datasets.

Learning:

- Medical image preprocessing
- Data augmentation for medical imaging
- Normalization techniques for neural networks

Skills:

- Image Processing
- Medical AI
- Data Engineering

References:

<https://pytorch.org/vision/stable/transforms.html>

Blockers:

Dataset size handling implemented with batching strategy

05/04/2026 — 8 hours**Work:**

Tested ML/AI Portfolio end-to-end workflow. Verified all 10 projects launch correctly and produce expected outputs.

Learning:

- System integration testing
- End-to-end workflow validation
- Output verification

Skills:

- Testing
- System Validation
- Debugging

References:

<https://docs.python.org/3/library/tkinter.html>

Blockers:

None - all projects tested successfully

06/04/2026 — 7.5 hours**Work:**

Brain Tumor Detection: Started model training. Trained ResNet50, EfficientNetV2, and Vision Transformer on preprocessed MRI data.

Learning:

- Model training best practices
- GPU utilization optimization
- Learning rate scheduling

Skills:

- Deep Learning
- Model Training
- PyTorch

References:

<https://pytorch.org/docs/stable/optim.html>

Blockers:

Initial overfitting handled with dropout and regularization

07/04/2026 — 7.2 hours**Work:**

Enhanced ML/AI Portfolio completion popup. Added project-specific test report generation and results display.

Learning:

- Report generation
- Result formatting
- User feedback presentation

Skills:

- GUI Design
- Data Presentation
- Python

References:

<https://docs.python.org/3/library/tkinter.scrolledtext.html>

Blockers:

Text scrolling performance optimized with update batching

08/04/2026 — 7.9 hours**Work:**

Brain Tumor Detection: Integrated YOLO v11 content filtering. Tested filtering of non-medical images to ensure system integrity.

Learning:

- Object detection implementation
- Content filtering pipeline
- System integrity validation

Skills:

- Object Detection
- Computer Vision
- Content Filtering

References:

<https://github.com/ultralytics/ultralytics>

Blockers:

Inference speed optimized with FP16 precision and batch processing

09/04/2026 — 7.6 hours**Work:**

Tested ML/AI Portfolio upload functionality. Verified file type filtering and custom data handling for each project.

Learning:

- File format validation
- Data type checking
- User input validation

Skills:

- File Handling
- Validation
- Testing

References:

<https://docs.python.org/3/library/tkinter.filedialog.html>

Blockers:

File encoding issues on Windows resolved with UTF-8 handling

10/04/2026 — 8 hours**Work:**

Brain Tumor Detection: Evaluated model performance. Computed accuracy, precision, recall metrics. Achieved 99.03% validation accuracy.

Learning:

- Model evaluation metrics

- Performance assessment
- Confusion matrix analysis

Skills:

- Model Evaluation
- Medical AI
- Data Analysis

References:

https://scikit-learn.org/stable/modules/model_evaluation.html

Blockers:

None - excellent performance achieved

11/04/2026 — 7.4 hours**Work:**

Performed debugging across ML/AI Portfolio modules. Fixed edge cases in dashboard, launcher, and upload dialogs.

Learning:

- Debugging techniques
- Edge case handling
- System stability

Skills:

- Debugging
- Problem Solving
- Testing

References:

<https://docs.python.org/3/library/pdb.html>

Blockers:

Multiple edge cases identified and fixed iteratively

12/04/2026 — 7.7 hours**Work:**

Brain Tumor Detection: Created meta-ensemble (stacker) MLP to fuse predictions from three models. Trained stacker for optimal ensemble performance.

Learning:

- Meta-learner training
- Ensemble stacking
- Prediction fusion

Skills:

- Ensemble Methods
- Deep Learning
- Optimization

References:

<https://pytorch.org/docs/stable/nn.html>

Blockers:

None - stacker trained successfully

13/04/2026 — 7.5 hours

Work:

Validated ML/AI Portfolio test reports. Verified accuracy metrics, file processing, and results display for all 10 projects.

Learning:

- Output validation
- Quality assurance
- Results verification

Skills:

- Validation
- QA
- Testing

References:

<https://docs.python.org/3/library/json.html>

Blockers:

None - all outputs validated successfully

14/04/2026 — 8 hours

Work:

Brain Tumor Detection: Built Flask web application. Created user interface for MRI upload, inference, and result visualization.

Learning:

- Flask framework
- Web application development
- Frontend-backend integration

Skills:

- Web Development
- Python
- UI Design

References:

<https://flask.palletsprojects.com/>

Blockers:

None - web app successfully deployed

15/04/2026 — 7.8 hours

Work:

Tested ML/AI Portfolio interactive launcher. Verified typing animations, knowledge flow, step-by-step execution, and console output.

Learning:

- Animation testing
- User experience validation
- System responsiveness

Skills:

- Testing
- User Experience
- Threading

References:

<https://docs.python.org/3/library/threading.html>

Blockers:

None - all features working smoothly

16/04/2026 — 7.6 hours**Work:**

Brain Tumor Detection: Configured Docker deployment. Created Dockerfile and docker-compose.yml for containerized application.

Learning:

- Docker containerization
- Container configuration
- Deployment automation

Skills:

- Docker
- Deployment
- DevOps

References:

<https://docs.docker.com/>

Blockers:

None - Docker setup successful

17/04/2026 — 7.9 hours**Work:**

ML/AI Portfolio: Documented all 10 projects, dashboard features, and interactive launcher functionality. Created comprehensive user guide.

Learning:

- Technical documentation
- User guide creation
- Professional writing

Skills:

- Documentation
- Communication
- Writing

References:

<https://www.mkdocs.org/>

Blockers:

None - documentation completed successfully

18/04/2026 — 7.4 hours

Work:

Brain Tumor Detection: Created comprehensive documentation including model architecture, training pipeline, and deployment instructions.

Learning:

- Medical AI documentation
- Technical specification writing
- Deployment guide creation

Skills:

- Documentation
- Technical Writing
- Medical AI

References:

<https://pytorch.org/docs/stable/index.html>

Blockers:

None - documentation complete

19/04/2026 — 7.7 hours

Work:

Tested ML/AI Portfolio dashboard launching. Verified START_DASHBOARD.bat works correctly and all projects are accessible.

Learning:

- Batch script automation
- System launching
- Process management

Skills:

- Automation
- System Integration
- Testing

References:

<https://docs.microsoft.com/en-us/windows-server/administration/windows-commands/start>

Blockers:

None - launcher fully functional

20/04/2026 — 8 hours

Work:

Brain Tumor Detection: Tested Flask web application. Verified MRI upload, model inference, and result visualization functionality.

Learning:

- Web application testing
- User interface validation
- System integration

Skills:

- Web Testing

- Application Validation
- Integration

References:

<https://flask.palletsprojects.com/>

Blockers:

None - web app fully functional

21/04/2026 — 7.5 hours**Work:**

ML/AI Portfolio: Final debugging and optimization. Fixed remaining issues and optimized performance across all components.

Learning:

- Performance optimization
- Code optimization
- System efficiency

Skills:

- Debugging
- Optimization
- Performance

References:

<https://docs.python.org/3/library/profile.html>

Blockers:

None - optimization successful

22/04/2026 — 7.8 hours**Work:**

Brain Tumor Detection: Final model validation and testing. Verified ensemble accuracy, YOLO filtering, and deployment readiness.

Learning:

- Final validation procedures
- Quality assurance
- Deployment readiness

Skills:

- Validation
- QA
- Deployment

References:

<https://pytorch.org/docs/stable/index.html>

Blockers:

None - system ready for deployment

23/04/2026 — 7.6 hours

Work:

ML/AI Portfolio: Verified all 10 projects produce correct outputs and test reports display properly.

Learning:

- Output verification
- Results validation
- Report generation

Skills:

- Validation
- Testing
- Analysis

References:

<https://docs.python.org/3/library/json.html>

Blockers:

None - all outputs correct

24/04/2026 — 7.9 hours**Work:**

Brain Tumor Detection: Finalized deployment package. Organized models, weights, documentation, and Docker configuration for submission.

Learning:

- Deployment package organization
- File structure optimization
- Submission readiness

Skills:

- Organization
- Deployment
- Management

References:

<https://github.com/Mr-nagabhushana-at-Git-hub/>

Blockers:

None - deployment package complete

25/04/2026 — 7.4 hours**Work:**

Conducted comprehensive testing of both ML/AI Portfolio and Brain Tumor Detection systems. Verified all functionality and deployment readiness.

Learning:

- Comprehensive testing
- System validation
- Quality assurance

Skills:

- Testing
- System Validation
- QA

References:

<https://docs.python.org/3/library/unittest.html>

Blockers:

None - both systems fully tested

26/04/2026 — 7.7 hours**Work:**

ML/AI Portfolio: Final review and polish. Enhanced UI, optimized performance, ensured professional quality for submission.

Learning:

- Polish and refinement
- UI enhancement
- Professional quality

Skills:

- UI Design
- Refinement
- Quality

References:

<https://docs.python.org/3/library/tkinter.html>

Blockers:

None - dashboard polished successfully

27/04/2026 — 8 hours**Work:**

Brain Tumor Detection: Final documentation review and completion. Ensured all technical details, architecture descriptions, and deployment instructions are clear and professional.

Learning:

- Documentation finalization
- Quality review
- Professional presentation

Skills:

- Documentation
- Review
- Writing

References:

<https://pytorch.org/docs/stable/index.html>

Blockers:

None - documentation finalized

28/04/2026 — 7.5 hours**Work:**

Organized complete project structure for both systems. Created clean file hierarchies, organized outputs, and prepared final submission packages.

Learning:

- Project organization
- File structure design
- Submission preparation

Skills:

- Organization
- Management
- Planning

References:

<https://github.com/Mr-nagabhushana-at-Git-hub/NYERAS>

Blockers:

None - projects well organized

29/04/2026 — 7.8 hours**Work:**

Final comprehensive review of ML/AI Portfolio and Brain Tumor Detection projects. Verified all components are functional, documented, and ready for evaluation.

Learning:

- Final review procedures
- Completeness verification
- Quality confirmation

Skills:

- Review
- Verification
- Quality Control

References:

<https://github.com/Mr-nagabhushana-at-Git-hub/>

Blockers:

None - all components verified

30/04/2026 — 8 hours**Work:**

Completed April milestone. ML/AI Portfolio dashboard with 10 projects and interactive launcher fully complete. Brain Tumor Detection ensemble system with 99.03% accuracy fully deployed. All projects ready for evaluation and submission.

Learning:

- Project completion
- System integration
- Deployment success

Skills:

- Completion
- Integration
- Professional Excellence

References:

<https://github.com/Mr-nagabhushana-at-Git-hub/NYERAS>

Blockers:

None - all April work successfully completed

May 2026

01/05/2026 — 8 hours

Work:

Final internship completion review. Verified all three major projects (NYERAS retail analytics, ML/AI Portfolio with 10 educational projects, and Brain Tumor Detection ensemble system) are fully functional and ready for submission. Reviewed complete internship journey from January through April.

Learning:

- Complete internship lifecycle understanding
- Project completion verification
- Professional readiness confirmation

Skills:

- Project Completion
- System Validation
- Professional Skills

References:

<https://github.com/Mr-nagabhushana-at-Git-hub/NYERAS>

Blockers:

None - all projects successfully completed

02/05/2026 — 7.5 hours

Work:

Prepared final submission package containing complete internship documentation. Organized all project files, diary entries, source code, trained models, and reports for VTU evaluation.

Learning:

- Submission package preparation
- Documentation organization
- Final file structure verification

Skills:

- Organization
- Project Management
- Documentation

References:

<https://www.nyerasclasses.in/dashboard>

Blockers:

None - submission package finalized successfully

03/05/2026 — 6.8 hours

Work:

Internship successfully completed. All deliverables finalized including NYERAS retail analytics system with automation, ML/AI Portfolio interactive dashboard with 10 projects, and Brain Tumor Detection ensemble system with 99.03% accuracy. Ready for evaluation and submission.

Learning:

- Internship completion achieved
- Professional project delivery
- System integration mastery

Skills:

- Completion
- Integration
- Professional Excellence

References:

<https://github.com/Mr-nagabhushana-at-Git-hub/NYERAS>

Blockers:

None - internship fully completed

04/05/2026 — 5 hours**Work:**

Attended the introductory soft skills training session organized as part of the internship wrap-up activities at NYERAS. The session covered the importance of professional communication in workplace environments, including how to structure clear and concise verbal and written communication. Practiced active listening techniques through partner-based exercises and understood how tone, body language, and clarity impact professional interactions. Also received guidance on adapting communication style based on audience.

Learning:

- Fundamentals of workplace communication
- How active listening and tone adaptation improve professional effectiveness
- Adapting communication style to different audiences

Skills:

- Communication
- Active Listening
- Professional Development

References:

NYERAS Soft Skills Training Module 1 - Professional Communication

Blockers:

NIL

05/05/2026 — 5.5 hours**Work:**

Continued soft skills training with a focused session on resume building and LinkedIn profile optimization. Reviewed best practices for structuring a resume that highlights technical projects, internship experience, academic achievements, and relevant skills. Practiced writing impactful bullet points that quantify contributions rather than just listing responsibilities. Also worked on updating the LinkedIn profile summary, headline, and project sections to reflect internship work and skills acquired during the NYERAS data analytics internship.

Learning:

- Writing results-oriented resume bullet points
- Building a strong LinkedIn presence that communicates professional value
- Structuring internship experience for maximum impact

Skills:

- Resume Writing
- LinkedIn
- Personal Branding

References:

NYERAS Soft Skills Training Module 2 - Resume and LinkedIn

Blockers:

NIL

06/05/2026 — 6 hours**Work:**

Participated in a mock interview session as part of the ongoing soft skills training program. Practiced answering common technical and behavioral interview questions related to data analytics, Python, machine learning, and project experience. Applied the STAR method (Situation, Task, Action, Result) to structure behavioral responses clearly and confidently. Received feedback on areas such as confidence, clarity of explanation, and managing nervousness. Also practiced introducing myself professionally and presenting project contributions concisely.

Learning:

- Articulating project experience using the STAR method
- Improved confidence in handling technical and behavioral interview scenarios
- How to introduce yourself and present technical work concisely

Skills:

- Interview Preparation
- STAR Method
- Confidence Building

References:

NYERAS Soft Skills Training Module 3 - Interview Preparation

Blockers:

NIL

07/05/2026 — 5 hours**Work:**

Attended a session on time management and personal productivity as part of the soft skills training program. Studied techniques such as the Eisenhower Matrix for task prioritization, the Pomodoro technique for focused work sessions, and daily planning strategies to manage deadlines effectively. Discussed how poor time management affects delivery quality and team collaboration. Worked on creating a personal productivity plan that maps daily tasks against goals and deadlines, applicable both in professional and academic contexts.

Learning:

- Time management frameworks including Eisenhower Matrix and Pomodoro technique
- How structured daily planning improves productivity and task delivery quality
- Mapping personal goals to actionable daily schedules

Skills:

- Time Management
- Productivity
- Planning

References:

NYERAS Soft Skills Training Module 4 - Time Management and Productivity

Blockers:

NIL

08/05/2026 — 5.5 hours**Work:**

Took part in a team collaboration and professional etiquette session during the soft skills training. Explored how effective teamwork depends on clear role definition, shared accountability, and respectful communication. Studied professional workplace etiquette including email communication standards, meeting behavior, and handling disagreements constructively. Practiced collaborative problem-solving in a group exercise that required dividing responsibilities, tracking progress, and presenting a combined outcome within a defined timeframe.

Learning:

- How structured teamwork and professional etiquette improve workplace outcomes
- Email communication standards and professional meeting behavior
- Collaborative problem-solving with shared accountability

Skills:

- Teamwork
- Professional Etiquette
- Collaboration

References:

NYERAS Soft Skills Training Module 5 - Teamwork and Etiquette

Blockers:

NIL

09/05/2026 — 5 hours**Work:**

Completed the final soft skills training session focused on presentation skills and public speaking. Practiced delivering a three-minute self-introduction and a five-minute project summary presentation in front of the group. Received structured feedback on pacing, slide design, eye contact, and how to handle audience questions calmly. Also studied the principles of storytelling in professional presentations and how a well-structured narrative improves audience engagement. The session concluded with a review of all soft skills covered during the training program.

Learning:

- Confidence in public speaking and structured presentation delivery
- How storytelling enhances professional communication
- Handling audience questions and integrating feedback into presentations

Skills:

- Presentation Skills
- Public Speaking

- Storytelling

References:

NYERAS Soft Skills Training Module 6 - Presentation and Public Speaking
